### **ABSTRACT**

The post-mortem diagnoses on 319 sheep performed between January 1974 and December 1977 were reviewed. Most deaths (55.49%) occurred in sheep under one year old. The most common pathological conditions were pneumonia (23.2%), haemonchosis (16.30%), Kata (Peste des petits ruminants) (12.23%) and enterotoxaemia (11.29%). The presenting clinical signs and/or history were summarized.
